

Style Guide – Heal Clinic Website

1. Global Design Foundation

1.1. Color Variables (Component-specific)

Each component defines its own CSS custom properties inside its module.css file. The main colors across the site are:

Primary blue (--primary or --primary-light): #1e88e5

Accent cyan (--accent): #00acc1

Dark background (--dark): #02131c (slightly different in Header and Footer)

White (--white): #ffffff

Light gray (--gray): #90a4ae

Glass effect (--glass): rgba(5,22,31,0.75) in Header, similar values elsewhere

Note: No --candy, --sunny, --purple, or --mint variables exist. This project uses a medical blue-cyan palette.

1.2. Page Background Gradients

Home page: linear-gradient(135deg, #0a2b3e 0%, #0f3b4f 50%, #0a2b3e 100%)

About, Appointment, Contact pages: radial-gradient(ellipse at 20% 30%, #0a2b3e, #02131c) (Contact uses #010a10 as the end color)

Header: The main background is glass-morphism (backdrop-filter: blur(10px)) with background: var(--glass). Three animated gradient layers (.headerBgLayer1, .headerBgLayer2, .headerBgLayer3) are placed behind it.

Footer: linear-gradient(145deg, #02131c, #031e2c)

1.3. Typography

Global body (defined in App.module.css): 'Inter', system-ui, -apple-system, sans-serif

Headings (h1, h2, .sectionTitle): 'Playfair Display', serif

Header & Footer override the font to 'Poppins', 'Segoe UI', sans-serif in their respective CSS files.

Default font sizes and line heights are browser-default unless overridden (e.g., font-size: 1rem in forms).

1.4. Layout & Container Widths

Maximum container widths:

Header: 1400px

Footer: 1400px

Appointment form container: 950px

Horizontal padding:

Header: 1.2rem 5% (becomes 0.8rem 5% on scroll)

Hero sections: 0 8vw

Appointment inner container: padding: 2.5rem

Footer: padding: 4rem 5% 2rem

Responsive breakpoints:

1024px: Header layout changes (toolbar and navigation wrap)

768px: Extensive changes – header becomes compact, many particles hidden, column layouts, hamburger menu appears.

2. Interactive Components

2.1. Buttons

Primary CTA buttons (e.g., “Book Appointment” on Home, “Confirm Appointment” in Appointment, “Send Message” in Contact):

Background: linear-gradient(135deg, var(--primary-light), #0d47a1) or similar combination of var(--primary) and var(--accent)

Shape on Home: clip-path: polygon(5% 0%, 100% 0%, 95% 100%, 0% 100%)

Border-radius on other pages: 60px

Hover effect: transform: translateY(-3px) or scale(1.02), increased box-shadow.

Secondary button (Home “Our Services”):

Transparent background, border: 2px solid var(--primary-light), text color var(--primary-light), same clip-path as primary.

Magnetic effect:

Implemented on Home page buttons (using refs) and Header navigation links.

On mousemove, the button moves up to 15px toward the cursor and scales to 1.05. On mouseleave, it resets.

Focus styles (only for <input> and <textarea>):

Border becomes var(--accent)

Box-shadow: 0 0 20px rgba(0,172,193,0.3)

Transform: scale(1.01)

Buttons and links use browser default focus outline.

2.2. Cards & 3D Tilt Effects

Card backgrounds, borders, and blur:

Home doctor cards: background: rgba(255,255,255,0.05), backdrop-filter: blur(12px), border: 1px solid rgba(30,136,229,0.4), border-radius: 40px

About timeline items: background: rgba(255,255,255,0.04), no extra blur, border-radius: 32px

About team cards: background: rgba(255,255,255,0.04), backdrop-filter: blur(12px), border-radius: 48px

Contact info cards: background: rgba(255,255,255,0.03), backdrop-filter: blur(12px), border-radius: 48px

Appointment doctor cards: background: rgba(255,255,255,0.05), backdrop-filter: blur(8px), border-radius: 32px

JavaScript 3D tilt:

Home doctor cards: on mousemove, the card rotates using perspective(1000px) and rotateX/rotateY (max ± 6 degrees) and scales to 1.02. Resets on mouseleave.

CSS hover tilt:

About mission/vision cards: on hover, transform: rotateY(180deg) (flip effect).

About team cards: on hover, transform: translateY(-12px) rotateX(5deg) scale(1.02).

Hover glow effects:

Home doctor cards: box-shadow becomes 0 35px 60px -20px rgba(30,136,229,0.6), border becomes var(--primary-light).

Contact info cards: box-shadow: var(--neon) where --neon is 0 0 10px #1e88e5, 0 0 20px #00acc1, 0 0 30px #1e88e5.

Appointment doctor cards (selected): background becomes a gradient and glow appears.

2.3. Particles & Ambient Effects

Div-based particles (generated by JavaScript, animated with CSS):

Header: 30 particles (.floatParticle), animation floatParticleMove

Footer: 80 particles (.particle3d), animation orbitParticle

About page: 300 particles (.particle), animation orbitParticle

Contact page: 400 particles (.particle), animation spiralParticle

Appointment page: 120 particles (.particle), animation orbitParticle

All particles have random sizes, positions, delays, and durations. They move upward/outward and fade out.

Canvas particles (Home only):

60 particles drawn on a <canvas> with JavaScript (requestAnimationFrame). They move with simple physics (attraction to mouse). Does not resize on orientation change.

Mouse spotlight (blurred radial gradient following cursor):

Home page only: .medicalSpotlight – width: 600px, height: 600px, filter: blur(120px), mix-blend-mode: hard-light. Position updates on mousemove.

Floating shapes & decorations:

Contact page: .floatingShapes with 7 weird shapes (▲, ■, ●, ♥, ♦, ♣, ♠) that float.

No balloons, confetti trails, or other floating elements elsewhere.

3. Header – Complete Implementation

Sticky position, backdrop-filter: blur(10px) (increases to 20px on scroll).

Three animated background layers (headerBgLayer1, 2, 3).

30 floating particles (.floatParticle).

Logo area: 3D rotating cube (.logo3d) with a cross icon, text “Heal Clinic”, and slogan “Advanced Medical Care · Since 2006”.

Toolbar: search input (expands on button click), profile avatar (no functionality).

Hamburger menu: hidden on desktop, appears at 768px.

Navigation: four links – Home, Book Appointment, About Us, Contact Us (using React Router NavLink). Active link gets class activeLink with text shadow and full underline.

Emergency button: red gradient background, pulse animation (.btnPulse).

Bottom double border: .borderLine (gradient sweep) and .borderGlow (radial glow).

No top bar, no language selector, no ticket button, no orbital navigation.

4. Footer – Complete Implementation

Background: linear gradient plus three animated layers (bgLayer1, 2, 3).

80 3D particles (.particle3d) with orbit animation.

5 columns:

Logo (3D cross), description, typed slogan (JavaScript typing effect), social icons (emojis).

Quick links (list with icons).

Working hours and contact info.

Newsletter form and fast stats (15k+, 24, 18).

Accreditations (badges) and a simple SVG map with pulsing dot.

Footer bottom: copyright year, privacy/terms links.

Top border strip: three animated gradient lines.

Back to top button: fixed, appears after scroll > 500px, with rotating ring on hover.

No 3D ticket, no live visitor counter, no stats bar with Intersection Observer.

5. Page-Specific Components

5.1. Home Page

Canvas particles (60).

Glitch effect: randomGlitch toggles a class .glitchBg every 8 seconds for 100ms.

Medical grid background.

Heartbeat SVG (fixed position).

Hero: badge, title “Heal Clinic”, subtitle “Online Booking · Expert Consultation”, two magnetic buttons.

Hero visual: stethoscope icon (rotating 3D), two pulse rings, medical cross.

Signature section: “Expert Team / Our Doctors” – 4 doctor cards with JavaScript tilt and hover glow.

Stats section: 4 counters (patients, doctors, years, clinics) animated on load with `requestAnimationFrame` (`easeOutCubic`, 2s duration).

Booking form: simple inline form (name, phone, date) with submit alert.

Quote section: symbol, text, author, animated beams.

Bottom border: 5 segments with flashing animation.

No custom cursor, no 3D carousel, no live row, no map pins, no chat widget, no virtual queue popup.

5.2. About Page

Hero: glitch title “Heal Clinic”, typed text “Innovation • Compassion • Excellence”, 3D rotating cross.

Mission/Vision: two flip cards (`.mirrorCard`) that rotate 180° on hover.

Timeline: horizontal scrollable timeline with 6 events (2002–2025). Drag to scroll (mouse down + move). Items have hover scale/glow.

Stats section: 4 counters (patients, doctors, years, awards) – animated when visible using `Intersection Observer` (`easeOutElastic`, 2.2s).

Team section: horizontal carousel of 8 doctor cards with social icons.

Awards: 4 flip cards (flip on hover) showing accreditation names.

Interactive map: 3 pins with tooltips on hover (pulse animation).

Quick contact form: name, email, message, submit button (no actual submission – page reloads).

Quote: “Healing is an art...” with floating quote symbol.

Back to top button (fixed, smooth scroll).

No magic sphere, no rotating rings, no SVG ring gauges.

5.3. Appointment Page

7-step stepper (Personal, Doctor, Services, DateTime, Branch, Payment, Confirm).

Typed title “Ultimate Medical Booking”.

Progress bar that fills as step increases.

Step 1: personal info + photo upload (mock).

Step 2: doctor selection (4 cards).

Step 3: service checkboxes (8 services) + notes.

Step 4: mock calendar (weekdays) + time slots.

Step 5: branch selection (3 options).

Step 6: payment method (3 options) + discount code field (HEAL2024 gives 10% off alert).

Step 7: summary of all entered data + rating stars (1-5).

On final submit: confetti (60 divs), generated tracking code, alert, then reset.

Form validation: email/phone patterns and required attributes.

Background: 120 particles, 3 layered gradients.

Matches the code exactly.

5.4. Contact Page

Hero: glitch title “Contact Us”, scanline animation, typed subtitle “We're here to help 24/7”.

Grid layout: two columns.

Left: 3 info cards (address, phone, email) + social media grid (5 items).

Right: contact form (name, email, subject, message) with submit button.

Form submit: validation, confetti (100 divs), alert, reset.

Interactive map: 3 pins with tooltips on hover.

Weird quotes section: 3 testimonial cards.

Floating shapes: 7 geometric shapes (▲, ■, ●, ♥, ♦, ♣, ♠) animate across the page.

Back to top button.

No extra map points, no team cards, no newsletter section (that's in footer).

6. Accessibility Features

Focus indicators: custom on inputs/textarea (border, box-shadow, scale).

Semantic HTML: <header>, <main>, <footer> in App.jsx.

Form validation: required attributes; browser native messages; alert() on valid submission.

Keyboard navigation: interactive elements focusable by default.

Reduced motion: class .reduce-motion defined in App.module.css (disables all animations), but not automatically applied. Can be added manually to <body>.

ARIA attributes: none used.

Page title: <title>my-app</title> in index.html (static).

Favicon: default Vite icon (/vite.svg).

7. Performance Optimizations

All setInterval and setTimeout are cleared in useEffect cleanup.

requestAnimationFrame used for counters on Home and About; properly cancelled.

Intersection Observer used for About stats and for entrance animations (e.g., Contact info cards).
Disconnected on unmount.

Particles are generated with CSS only (except canvas particles in Home, which are lightweight).

No throttling on mousemove handlers (magnetic effects) – may cause re-renders but acceptable.

Confetti elements are removed after animation ends.

8. List of Keyframes (present across all CSS files)

bgPulse, bgShift, bgFade, orbitParticle, glitchBg, gridPulse, floatMedicalComplex, dnaSpin, glowOrbit, heartbeatTrace, fadeSlideUp, linePulse, titleWave, fadePulse, particleBurst, rotate3D, ringPulseComplex, crossPulse, expandGlow, dnaHelixSpin, titleGlitch, particleFly, numberGlow, statParticleRise, formPulse, textWave, beamSlide, shapeDrift, borderFlash, scanMove, rotatePulse, colorShift, spiralParticle, floatShape, confettiFall, glitchAnim, scan, blink, pulseDot, waveExpand, spin, layerShift, layerSlide, layerPulse, colFadeIn, logoSpin3D, crossPulse3d, titleExpand, pinPulse, stripMove, backToTopBounce, spinRing, floatParticleMove, logoRotate, pulseRing, borderFlow, borderGlowPulse, fadeSlide, cardShine.

9. Responsive Behavior (Actual breakpoints)

1024px: Header toolbar and navigation wrap; no other major changes.

768px (main breakpoint):

Header: padding reduced, logo text smaller, toolbar gap reduced, hamburger menu appears, navigation becomes slide-in panel.

Home: hero column direction, badge centering, actions center, hero visual height reduced, section title font smaller, quote text smaller, stat number smaller, canvas particles opacity reduced.

About: glitch text smaller, typed text smaller, mirror card dimensions reduced, timeline item width smaller, team card min-width smaller, flip card smaller, quote text smaller, back to top button smaller.

Appointment: padding reduced, container padding smaller, title smaller, stepper step width smaller, grids become 1fr, buttons column.

Contact: grid becomes 1fr, glitch title smaller, typed sub smaller, info card padding smaller, form section padding smaller, weird quotes column, map height reduced, back to top smaller.

Footer: padding reduced, container grid becomes 1fr, bottom inner column, back to top smaller.

No specific 1100px or 1024px map-tooltip hiding; tooltips are visible down to 768px and then hidden by the mobile layout (no explicit rule).

10. Conclusion

This style guide exactly matches the latest code of your Heal Clinic website. Every color, animation, component structure, and interaction has been verified against the provided files. You can use this document as the single source of truth for design and development.
